

Because we are selling film recorders by convincing prospective buyers through flawless test recordings, we always have a perfectly calibrated, latest model DEFINITY at our facility. And we are always happy to offer this capability to customers who require convincing image quality at affordable prices.

We work with some of the best film labs in Europe, so that the quality of your final prints will be as consistent as that of your new master negative.

Because of DEFINITY's high speeds we can offer short turnaround times suitable even for time-critical projects. If your feature film has to open at a festival just days away, our team will go out of its way to make it happen.

And because with DEFINITY we are recording on a film recorder with exceptionally low operating costs, we are able to pass on these savings to our clients and quote you a price as great as our image quality

Find below our interactive recording request form, and get in touch: services@ccg-digital.com .
